Appendix N Statistics on Complaints, Notifications of Summons and Successful Prosecutions

#### **EXECUTIVE SUMMARY**

The Entrusted Portion of Widening of Tolo Highway / Fanling Highway between Island House Interchange and Fanling Stage 2 (hereafter called "the Project") covers part of the construction of the widening of Tolo Highway / Fanling Highway between Island House Interchange and Fanling which aimed to widen Tolo Highway and Fanling Highway to dual 4-lane carriageway in order to alleviate the current traffic congestion problems and to cope with the increasing transport demands to and from the urban areas and also cross boundary traffic. The Project covers construction activities at Yuen Leng along the existing Fanling Highway.

The impact EM&A for the Project includes air quality, noise and water quality monitoring. The EM&A programme commenced on 5 November 2013.

This report documents the findings of EM&A works conducted in October 2020. As informed by the Contractor, no remaining activities in the reporting month.

Breach of Action and Limit Levels for Air Quality

No exceedance of Action and Limit Level was recorded for 24-hour TSP monitoring at the monitoring location AM1(SR77) in the reporting month.

No exceedance of Action and Limit Level was recorded for 1-hour TSP monitoring at the monitoring location AM1(SR77) in the reporting month.

Breach of Action and Limit Levels for Noise

No noise complaint was received in the reporting month, so no Action Level exceedance was recorded. Also, no Limit Level exceedance of noise monitoring was recorded in the reporting month.

Breach of Action and Limit Levels for Water Quality

The box culvert works have been completed in the end of March 2017. The 4-week post construction water quality monitoring has been completed in the end of April 2017 in the same manner as the impact monitoring.

Complaint, Notification of Summons and Successful Prosecution

No complaint, notification of summons and successful prosecution was received in the reporting month.

Future Key Issues

No remaining construction works in the coming reporting month are anticipated.

Potential environmental impacts arising from the above construction activities are anticipated to be mainly associated with construction dust, noise, water quality and waste management.

#### 1 INTRODUCTION

1.1.1 Chun Wo Construction & Engineering Co Ltd (Chun Wo) was commissioned by the Civil Engineering and Development Department (CEDD) as the Civil Contractor for the Entrusted Portion of Widening of Tolo Highway / Fanling Highway between Island House Interchange and Fanling Stage 2. Meinhardt Infrastructure & Environment Ltd (MIEL) has been appointed by Chun Wo as the Environmental Team (ET) to fulfill the corresponding EM&A requirements pursuant to Environmental Permit No. EP-324/2008/E in accordance with the Updated EM&A Manual (dated October 2013) for Widening of Tolo Highway/Fanling Highway between Island House Interchange and Fanling Stage 2. The EM&A programme commenced on 5 November 2013.

#### 1.2 Purpose of the Report

1.2.1 This is the monthly EM&A Report which summaries the impact monitoring results and audit findings for the Project during the reporting month of October 2020.

#### 1.3 Report Structure

1.3.1 This monthly EM&A Report comprises the following sections:

Section 1: Introduction

Section 2: Project Information

Section 3: Status of Environmental Licenses, Notifications and Permits

Section 4: Air Quality Monitoring

Section 5: Noise Monitoring

Section 6: Water Monitoring

Section 7: Waste Management

Section 8: Environmental Site Inspection and Audit

Section 9: Implementation Status of Environmental Mitigation Measures

Section 10: Summary of EP Submission in the Reporting Month

Section 11: Environmental Non-Conformance

Section 12: Future Key Issues

Section 13: Conclusions and Recommendations

#### 2 PROJECT INFORMATION

#### 2.1 Background

- 2.1.1 Tolo Highway and Fanling Highway are expressways in the North East New Territories connecting Sha Tin, Tai Po and Fanling. These highways form a vital part of the strategic Route 1, which links Hong Kong Island to Shenzhen. At present, this section of Route 1 is a dual 3-lane carriageway. However, at several major interchanges along this section of Route 1, the highway is only dual-2 lane. Severe congestion is a frequent occurrence during peak periods, particularly in the Kowloon bound direction.
- 2.1.2 The objective of the Widening of Tolo Highway / Fanling Highway between Island House Interchange and Fanling is to widen Tolo Highway and Fanling Highway to dual 4-lane carriageway in order to alleviate the current traffic congestion problems and to cope with the increasing transport demands to and from the urban areas and also cross boundary traffic.
- 2.1.3 The construction works for the Widening of Tolo Highway / Fanling Highway between Island House Interchange and Fanling are to be delivered in 2 stages:
  - Stage 1 Construction works between Island House Interchange and Tai Hang; and
  - Stage 2 Construction works between Tai Hang and Wo Hop Shek Interchange.
- 2.1.4 The construction works of Stage 1 under the EP commenced in November 2009 and was planned to be completed in December 2013 tentatively. The works of Stage 2 was planned to commence in November 2013 and complete by end of 2016. Hyder-Arup-Black and Veatch Joint Venture (HABVJV) was appointed by the Highways Department (HyD) as the consultants for the design and construction assignment for the Project. Mott MacDonald Hong Kong Ltd is the Independent Environmental Checker (IEC) of both Stage 1 and Stage 2 works.
- 2.1.5 A portion of Stage 2 works of Widening of Tolo Highway / Fanling Highway between Island House Interchange and Fanling (hereafter called "the Project") is entrusted to the contractor of Contract No. CV/2012/09 Liantang / Heung Yuen Wai Boundary Control Point Site Formation and Infrastructure Works Contract 3, i.e. Chun Wo. AECOM Asia Co Ltd was appointed by the CEDD as the consultant for the design and construction assignment for the Liantang development.
- 2.1.6 The Project is a Designated Project under the Environmental Impact Assessment Ordinance (EIAO) (Cap. 499). An Environmental Impact Assessment (EIA) Report together with an Environmental Monitoring and Audit (EM&A) Manual were approved on 14 July 2000 (Register Number: EIA-043/2000). The Project is governed by an Environmental Permit (EP) (EP-324/2008) which was granted on 23 December 2008. A variation of EP (VEP) was applied and the VEP (EP-324/2008/A) was subsequently granted on 31 January 2012. An additional VEP has been applied on 24 February 2014 and the VEP (EP-324/2008/B) was subsequently granted on 17 March 2014. Furthermore, an additional VEP has been applied on 9 March 2015 and the VEP (EP-324/2008/C) was subsequently granted on 27 March 2015. The previous VEP (EP-324/2008/D) was granted on 27 August 2015. The current VEP (EP-324/2008/E) was granted on 26 January 2017.

#### 2.2 Site Description

2.2.1 The major construction activities under the Entrusted Portion of Widening of Tolo Highway / Fanling Highway between Island House Interchange and Fanling Stage 2 include:

At-Grade Road Works – Temporary and permanent road formation, pipe laying, road drainage, footpath and noise barrier construction;

Demolition of existing Kiu Tau Footbridge and Footbridge Reprovision; and

Box Culvert Extension – Flow diversion of existing stream, excavation, sub-base and blinding, base, wall and top slab construction.

2.2.2 **Figure 1** shows the works areas for the Entrusted Portion of Widening of Tolo Highway / Fanling Highway between Island House Interchange and Fanling Stage 2.

#### 2.3 Construction Programme and Activities

- 2.3.1 No remaining construction activities undertaken in the reporting month.
- 2.3.2 No construction programme will be presented in **Appendix A** as no remaining construction activities will be undertaken.

#### 2.4 Project Organisation

2.4.1 The project organization structure is shown in **Appendix B**. The key personnel contact names and numbers for the Project are summarised in **Table 2.1**.

**Table 2.1 Contact Information of Key Personnel** 

| Party             | Role  | Position                 | Name                                 | Telephone | Fax       |

#### 4 AIR QUALITY MONITORING

#### 4.1 Monitoring Requirement

4.1.1 In accordance with the Updated EM&A Manual, 1-hr and 24-hr total suspended particulate (TSP) levels at the designated air quality monitoring station are required. Impact 24-hour TSP monitoring should be carried out for at least once every 6 days. For the 1-hr TSP impact monitoring, the sampling frequency of at least three times in every 6 days should be undertaken when the highest dust impact occurs.

#### 4.2 Monitoring Equipment

4.2.1 The 1hr- TSP and 24-hr TSP air quality monitoring were performed using a High Volume Sampler (HVS), of which its location and operation satisfy, as far as practicable, all the requirements as specified in the Updated EM&A Manual. The brand and model of the equipment are given in **Table 4.1**.

Table 4.1 Air Quality Monitoring Equipment

| Equipment   | Brand and Model  | Quantity | Serial Number |
|---|--|----------|---------------|
| High Volume<br>Sampler<br>(1-hr TSP and<br>24-hr TSP) | Tisch Total Suspended Particulate Mass Flow Controlled High Volume Air Sampler (Model No. TE-5170 MFC) | 1        | 2359          |
| Handheld TSP<br>meter                                 | TSI AM520  | 1        | 5201735006    |

- 4.2.2 The HVS and its accessories were maintained in good working condition, such as replacing motor brushes routinely and checking electrical wiring to ensure a continuous power supply.
- 4.2.3 Calibration of the HVS (five point calibration) using Calibration Kit was carried out every two months. The HVS calibration orifice will be calibrated annually.
- 4.2.4 The electricity supply of HVS at AM1(SR77) was suspended from 16 May 2019 and was no longer available. In order to have a more secure electricity supply, an alternative Handheld TSP meter was proposed to use for the temporary monitoring of 24-hr & 1hr air quality from 22 May 2019. In this regard, IEC and ER have no adverse comment on it. And Calibration certificates of the Handheld TSP meter are provided in **Appendix C**.

#### 4.3 Monitoring Location

4.3.1 Air quality monitoring was conducted at the location specified in the Updated EM&A Manual. **Table 4.2** describes the details of the air quality monitoring station with its location as shown in **Figure 2**.

Table 4.2 Location of Air Quality Monitoring

| Air Monitoring Station ID | Monitoring Location | Description               |
|---------------------------|---------------------|---------------------------|
| AM1(SR77) *               | Yuen Leng 2 *       | Residential, Ground floor |

Remark:

Location and Station / ASR ID as identified in Updated EM&A Manual / EIA Report for Widening of Tolo Highway/Fanling Highway between Island House Interchange and Fanling

#### 4.4 Monitoring Parameters, Frequency and Duration

**Table 4.3** summarizes the monitoring parameters, frequency and duration of impact TSP monitoring.

 Table 4.3
 Air Quality Monitoring Parameters, Frequency and Duration

| Parameter   | Frequency and Duration   |
|-------------|--|
| 1-hour TSP  | At least three times in every 6 days should be undertaken when the highest dust impact occur |
| 24-hour TSP | Once every 6 days  |

#### 4.5 Monitoring Methodology

1-hr and 24-hr TSP Monitoring

- 4.5.1 With the consideration of criteria stated in the Updated EM&A Manual, the HVS was installed in the vicinity of the air sensitive receivers.
- 4.5.2 The relevant data including temperature, pressure, weather conditions, elapsed-time meter reading for the start and stop of the sampler, identification and weight of the filter paper, and any special phenomena observed were recorded. The weather information was referenced from Hong Kong Observatory (http://www.weather.gov.hk/wxinfo/pastwx/extractc.htm).
- 4.5.3 A HOKLAS accredited laboratory with constant temperature and humidity control, and equipped with necessary measuring and conditioning instruments, to handle the 24-hr TSP samples, was employed for sample analysis.
- 4.5.4 Filter papers of size 8"x10" were labelled before sampling. They were inspected to be clean with no pin holes and conditioned in a humidity controlled chamber for over 24-hr and were pre-weighed before use for the sampling.
- 4.5.5 The 24-hr TSP levels were measured by following the standard high volume sampling method for TSP as set out in the Title 40 of the United States Code of Federal Regulations, Chapter 1 (Part 50), Appendix B. TSP was sampled by drawing air through a conditioned, pre-weighted filter paper inside the HVS at a controlled air flow rate. After 24-hr sampling, the filter papers loaded with dust were kept in a clean and tightly sealed plastic bag, and then returned to the laboratory for reconditioning in the humidity controlled chamber followed by accurate weighing by an electronic balance with a readout down to 0.1 mg.
- 4.5.6 All the collected samples were kept in a good condition for 6 months before disposal.
- 4.5.7 For 1-hr TSP monitoring, monitoring methodology is the same as 24-hr TSP monitoring which has been presented in **Section 4.5.1** to **Section 4.5.6**, but with sampling period changed to 1 hour.

#### 4.6 Monitoring Schedule for the Reporting month

- As informed by the contractor, all major construction activities of the Entrusted Portion Project of Section 1A and 1B were substantially completed on 28 September 2018 and 3 October 2018 respectively. In such regard, the EM&A Programme of the captioned project, including monthly EM&A reporting and the corresponding environmental monitoring and audit works, is no longer required and we proposed to cease it by the end of December 2018 and we have submitted the termination proposal to EPD on 24 December 2018. And EPD are replied the EM&A monitoring shall only be terminated when insignificant environmental impacts of the remaining outstanding construction works are expected and agreement of EPD. After that we have submitted the termination proposal to EPD on 4 April 2019 again. EPD replied we need to provide the Final EM&A Report to facilitate their consideration for the termination on 14 May 2019. Therefore, the EM&A monitoring and audit works will be ceased upon EPD's approval for the termination proposal is approved. The tentative schedule for environmental monitoring for the reporting month is provided in **Appendix D**.
- 4.6.2 Meteorological data extracted from Hong Kong Observatory for the reporting month is provided in **Appendix E.**

#### 4.7 Monitoring Results

4.7.1 The monitoring results for 1-hr and 24-hr TSP are summarised in **Table 4.4** and **Table 4.5** respectively. Detailed air quality monitoring results and the graphical presentation of air quality monitoring data for the current and past three reporting months are presented in **Appendix F**.

Table 4.4 Summary of 1-hr TSP Monitoring Results

| ASR ID      | Average<br>(μg/m³) | Range (μg/m³) | Action Level<br>(μg/m³) | Limit Level<br>(μg/m³) |
|-------------|--------------------|---------------|-------------------------|------------------------|
| AM1(SR77) * | 100.8              | 25.4 – 147.7  | 292.7                   | 500                    |

Remark:

Table 4.5 Summary of 24-hr TSP Monitoring Results

| ASR ID      | Average<br>(μg/m³) | Range (μg/m³) | Action Level<br>(μg/m³) | Limit Level<br>(µg/m³) |
|-------------|--------------------|---------------|-------------------------|------------------------|
| AM1(SR77) * | 49.1               | 14.4 – 71.1   | 170.3                   | 260                    |

Remark:

- 4.7.2 No exceedance of Action and Limit Level was recorded for 24-hour TSP monitoring at the monitoring location AM1(SR77) in the reporting month.
- 4.7.3 No exceedance of Action and Limit Level was recorded for 1-hour TSP monitoring at the monitoring location AM1(SR77) in the reporting month.
- 4.7.4 The Event and Action Plan for the occurrence of non-compliance of the air quality criteria is annexed in **Appendix G**.

<sup>\*</sup> Station / ASR ID as identified in Updated EM&A Manual / EIA Report for Widening of Tolo Highway/Fanling Highway between Island House Interchange and Fanling

<sup>\*</sup> Station / ASR ID as identified in Updated EM&A Manual / EIA Report for Widening of Tolo Highway/Fanling Highway between Island House Interchange and Fanling

#### 5 NOISE MONITORING

#### 5.1 Monitoring Requirements

5.1.1 In accordance with the Updated EM&A Manual, the impact noise monitoring frequency shall depend on the scale of the construction activities. An initial guide on the regular monitoring frequency should be at least once per week when noise generating activities are underway.

#### 5.2 Monitoring Equipment

5.2.1 Noise monitoring was performed using a sound level meter at the monitoring station. The sound level meter deployed complies with the International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1) specifications. An acoustic calibrator was deployed to check the sound level meter at a known sound pressure level. The brand and model of the equipment is given in **Table 5.1**.

Table 5.1 Noise Monitoring Equipment

| Equipment                 | Brand and Model        | Quantity | Serial Number |
|---------------------------|------------------------|----------|---------------|
| Sound Level<br>Calibrator | Rion (Model No. NC-74) | 1        | 34678506      |
| Sound Level Meter         | Rion (Model No. NL-52) | 1        | 00175560      |

5.2.2 The sound level calibrator and sound level meter were verified by a certified laboratory every year. Calibration certificates of the sound level meter and acoustic calibrator are provided in **Appendix C**.

#### 5.3 Monitoring Locations

5.3.1 Impact noise monitoring was conducted at the location specified in the Updated EM&A Manual. **Table 5.2** describes the details of the noise monitoring station with its location as shown in **Figure 2**.

Table 5.2 Location of Noise Monitoring

| NSR ID     | Monitoring Location                  | Description |
|------------|--------------------------------------|-------------|
| M1(SR77) * | 7) * Yuen Leng 2 * Residential, Grou |             |

Remark:

#### 5.4 Monitoring Parameters, Frequency and Duration

**Table 5.3** summarizes the monitoring parameters, frequency and duration of impact noise monitoring.

Location and Station / NSR ID as identified in Updated EM&A Manual / EIA Report for Widening of Tolo Highway/Fanling Highway between Island House Interchange and Fanling

Table 5.3 Noise Monitoring Parameters, Frequency and Duration

| Parameter and Duration   | Frequency              |  |
|--|------------------------|--|
| 30-mins measurement at between 0700 and 1900 on normal weekdays. Leq, L10 and L90 would be recorded. | At least once per week |  |

#### 5.5 Monitoring Methodology

- 5.5.1 The monitoring procedures are summarised as follows:
  - The sound level meter was set on a tripod at a height of 1.2 m above the ground for free-field measurements at monitoring station SR77;
  - The battery condition was checked to ensure good functioning of the meter;
  - Parameters such as frequency weighting, the time weighting and the measurement time were set as follows:
  - Frequency weighting: A
  - Time weighting: Fast
  - Parameters: Leq, L10 and L90
  - Time measurement: Leq(30-minutes) during non-restricted hours i.e. 07:00 19:00 hrs on normal weekdays
  - Prior to and after each noise measurement, the meter was calibrated using the acoustic calibrator for 94dB(A) at 1000 Hz. If the difference in the calibration level before and after measurement was more than 1dB(A), the measurement would be considered invalid and repeat of noise measurement would be required after recalibration or repair of the equipment.
  - At the end of the monitoring period, the Leq, L10 and L90 were recorded. In addition, site conditions and noise sources were recorded on a standard record sheet.
  - A façade correction of +3dB (A) shall be made to the noise parameter obtained by free field measurement.

#### 5.6 Monitoring Schedule for the Reporting Month

5.6.1 The schedule for environmental monitoring for the reporting month is provided in **Appendix D**. Meteorological data extracted from Hong Kong Observatory for the reporting month is provided in **Appendix E**.

#### 5.7 Monitoring Results

5.7.1 The monitoring results for noise are summarized in **Table 5.4** and the monitoring results and the graphical presentation of noise level for the current and past three reporting months are presented in **Appendix H**.

Table 5.4 Summary of Noise Monitoring Results

| Noise<br>Monitoring<br>Station ID | Average,<br>dB(A), Leq<br>(30min) (2) | Range, dB(A),<br>Leq (30min) <sup>(2)</sup> | Action Level                                    | Limit<br>Level,<br>dB(A) |
|-----------------------------------|---------------------------------------|---|---|--------------------------|
| M1(SR77) <sup>(1)</sup>           | 64.3                                  | 62.5 – 65.5                                 | When one documented valid complaint is received | 75                       |

#### Remark:

- (1) Station / NSR ID as identified in Updated EM&A Manual / EIA Report for Widening of Tolo Highway/Fanling Highway between Island House Interchange and Fanling
- (2) +3dB(A) façade correction included
- 5.7.2 Major noise sources during the noise monitoring included construction activities of the Project and that along Tai Wo Service Road East, and nearby traffic noise.
- 5.7.3 No noise complaint was received in the reporting month, so no Action Level exceedance was recorded. Also, no Limit Level exceedance of noise monitoring was recorded in the reporting month.
- 5.7.4 The Event and Action Plan for the occurrence of non-compliance of the noise criteria is annexed in **Appendix G**.

#### **6 WATER MONITORING**

6.1.1 The box culvert works had been completed in March 2017. The 4-week post-construction water quality monitoring at I5 was completed in 28 April 2017.

#### 7 WASTE MANAGEMENT

- 7.1.1 The Contractor has registered as a chemical waste producer of the Project. The C&D materials and waste sorting were carried out on-site. Receptacles were provided for general refuse collection.
- 7.1.2 As advised by the Contractor, no excavated material has been generated. No inert C&D materials was disposed of at public fill to TM Area 38. No inert C&D materials were reused on site. No general refuse was disposed of at North East New Territories (NENT) Landfill. No plastic was collected by recycling contractor in the reporting month. No paper/cardboard packaging was collected by recycling contractor in the reporting month. No chemical waste was collected by licensed contractor in the reporting period. Details of the waste management data are presented in **Appendix K**.

#### 8 ENVIRONMENTAL SITE INSPECTION AND AUDIT

#### 8.1 Site Inspection

- 8.1.1 Site inspections were carried out on a weekly basis to monitor the implementation of proper environmental pollution control and mitigation measures for the Project. A summary of the site inspection is provided in **Appendix L**.
- 8.1.2 In the reporting month, 4 weekly site inspections were carried out on 7, 14, 21 and 28 October 2020. No Joint site inspection was conducted with the EPD. No non-compliance was recorded during the site inspection. A summary of the reminders and observations recorded during the site inspections are presented in **Table 8.1**.

Table 8.1 Observations and Recommendations of Site Audit

| Parameters Date                  |                | Observations and Recommendations |     |  |
|----------------------------------|----------------|----------------------------------|-----|--|
| Air Quality                      | ir Quality N/A |                                  |     |  |
| Noise                            | N/A N/A        |                                  |     |  |

| Permits /<br>Licenses            | N/A            | N/A N/A                          |     |  |

## 9 IMPLEMENTATION STATUS OF ENVIRONMENTAL MITIGATION MEASURES

9.1.1 The Contractor has implemented the relevant environmental mitigation measures as specified in the EIA Reports, EPs and updated EM&A Manual. The implementation status of environmental mitigation measures during the reporting period is summarized in **Appendix L**.

#### 10 SUMMARY OF EP SUBMISSION IN THE REPORTING MONTH

10.1.1 The status of the required submission under the EP during the reporting period is summarized in **Table 10.1**.

Table 10.1 Status of Required Submission under Environmental Permit

| EP Condition  | Submission                             | Submission Date |  |
|---------------|--|-----------------|--|
| Condition 3.3 | Monthly EM&A Report for September 2020 | 14 October 2020 |  |

#### 11 ENVIRONMENTAL NON-CONFORMANCE

#### 11.1 Summary of Monitoring Exceedances

- 11.1.1 No exceedance of Action and Limit Level were recorded for 24-hour TSP monitoring at the monitoring location AM1(SR77) in the reporting month.
- 11.1.2 No exceedance of Action and Limit Level was recorded for 1-hour TSP monitoring at the monitoring location AM1(SR77) in the reporting month.
- 11.1.3 No noise complaint was received in the reporting month, so no Action Level exceedance was recorded. Also, no Limit Level exceedance of noise monitoring was recorded in the reporting month.
- 11.1.4 The 4-week post-construction water quality monitoring at I5 was completed in April 2017.

#### 11.2 Summary of Environmental Non-Compliance

11.2.1 No environmental non-compliance was recorded in the reporting month. The cumulative statistics are provided in **Appendix N**.

#### 11.3 Summary of Environmental Complaints

11.3.1 No environmental complaints were received in the reporting month. The cumulative statistics are provided in **Appendix N**.

#### 11.4 Summary of Environmental Summon and Successful Prosecutions

11.4.1 No environmental related prosecution or notification of summons was received in the reporting month. The cumulative statistics are provided in **Appendix N**.

#### 12 FUTURE KEY ISSUES

#### 12.1 Construction Programme for the Next Month

No remaining construction works in the coming reporting month are anticipated.

#### 12.2 Key Issues for the Coming Month

- 12.2.1 Key issues to be considered in the coming month are anticipated to include:
  - Properly maintain all drainage facilities and wheel washing facilities on site;
  - Good housekeeping should be maintained and general refuse should be removed regularly; and
  - Watering shall be enhanced over the construction site.

#### 12.3 Monitoring Schedule for the Next Month

12.3.1 According to the site construction activities were completed and the air and noise monitoring will be suspended from November 2020. There are no tentative schedule for environmental monitoring for the coming month will be provided.

#### 13 CONCLUSIONS AND RECOMMENDATIONS

#### 13.1 Conclusions

- 13.1.1 The construction phase EM&A programme of the Project commenced on 5 November 2013.
- 13.1.2 The 1-hr TSP, 24-hr TSP, noise and water quality monitoring were carried out in the reporting period.
- 13.1.3 No exceedance of Action and Limit Level was recorded for 24-hour TSP monitoring at the monitoring location AM1(SR77) in the reporting month.
- 13.1.4 No exceedance of Action and Limit Level was recorded for 1-hour TSP monitoring at the monitoring location AM1(SR77) in the reporting month.
- 13.1.5 No noise complaint was received in the reporting month, so no Action Level exceedance was recorded. Also, no Limit Level exceedance of noise monitoring was recorded in the reporting month.
- 13.1.6 The 4-week post-construction water quality monitoring at I5 was completed in April 2017.
- 13.1.7 Four (4) environmental site inspections were carried out in the reporting month. Recommendations on remedial actions were given to the Contractors for the deficiencies identified during the site audit.

#### 13.2 Recommendations

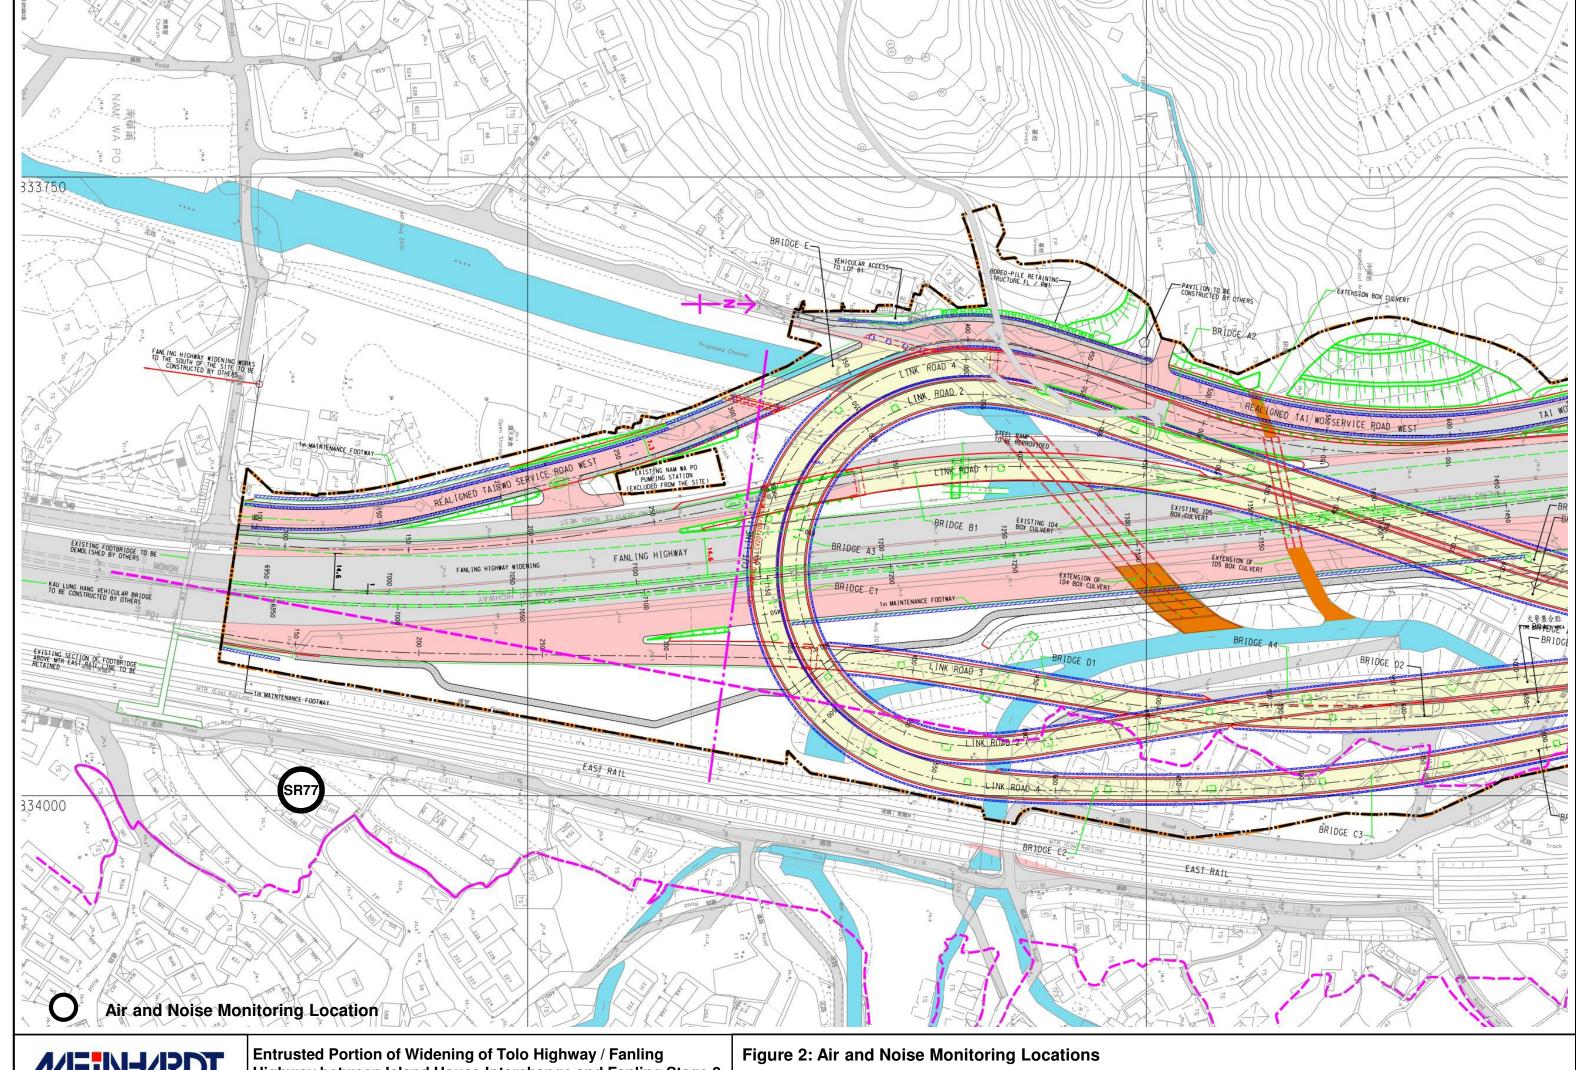

According to the environmental site inspections performed in the reporting month, no following recommendation was provided.

Sound Level Calibrator

904042

NIM-PRC & SCL-HKSAR

The values given in this Calibration Certificate only relate to the values measured at the time of the test and any uncertainties quoted will not include allowance for the equipment long term drift, variations with environmental changes, vibration and shock during transportation, overloading, mis-handling, or the capability of any other laboratory to repeat the measurement. Hong Kong Calibration Ltd. shall not be liable for any loss or damage resulting from the use of the equipment.

The test equipment used for calibration are traceable to International System of Units (SI), or by reference to a natural constant. The test results apply to the above Unit-Under-Test only

Calibrated by :

Elva Chong

Approved by:

30-Mar-20

Date:

Kin Wong

This Certificate is issued by:

Hong Kong Calibration Ltd.

Unit 8B, 24/F., Well Fung Industrial Centre, No. 58-76, Ta Chuen Ping Street, Kwai Chung, NT, Hong Kong,

4.2 Time Weighting (A-weighted)

| 4.2 Time Weighting |            | T TT 7/75    | D:cc       | TEC (1/72    |
|--------------------|------------|--------------|------------|--------------|
| UUT                | Applied    | UUT          | Difference | IEC 61672    |
| Setting            | Value (dB) | Reading (dB) | (dB)       | Type 1 Spec. |
| Fast               | 94.0       | 94.0 (Ref.)  |            | ± 0.3 dB     |
| Slow               | 94.0       | 94.0         | 0.0        |              |
| Time-averaging     | 94.0       | 94.0         | 0.0        |              |

Uncertainty: ± 0.1 dB

Remarks: 1. UUT: Unit-Under-Test

2. The uncertainty claimed is for a confidence probability of not less than 95%.

3. Atmospheric Pressure: 1 002 hPa.

4. Microphone model: UC-59, S/N: 07040 5. Preamplifier model: NH-25, S/N: 10553

6. Firmware Version: 1.8

7. Power Supply Check: OK

8. The UUT was adjusted with the supplied sound calibrator at the reference sound pressure level before the calibration.

No major dust source observed during the monitoring period Data in **Bold** denotes exceedanece of respective Action Level Note:

Data in Bold Underline denotes exceedance of respective Limit Level
The electricity supply of HVS at AM1(SR77) was suspended from 16 May 2019 and was no longer available. In order to have a more secure electricity supply, an alternative Handheld TSP meter was proposed to use for the temporary monitoring of 24-hr & 1hr air quality

from 22 May 2019.

# Average 64.3 Minimum 62.5 Maximum 65.5

### Remarks

<sup>\* +3</sup>dB(A) Façade effect correction included

<sup>\*\*</sup> Baseline corrected level is only calculated when measured noise level (Leq) > limit level.

<sup>\*\*\*</sup> Data in **Bold Underline** denotes exceedance of respective Limit Level

# Appendix K Waste Flow Table

| Dec-19    |  |                          |                          |                          |                          |                          |                          |   |                          |                          |                      |                          |
| Total     | 1.323  | -                        | 1.323                    | -                        | -                        | 1.323                    | -                        | -   | -                        | -                        | -                    | 0.125                    |

Note:

- 1. Assume the density of soil fill is 2 ton/m<sup>3</sup>.
- 2. Assume the density of rock and broken concrete is 2.5 ton/m<sup>3</sup>.
- 3. Assume each truck of C&D wastes is 5m<sup>3</sup>.
- 4. The inert C&D materials except slurry and bentonite are disposed at Tuen Mun 38.
- 5. The slurry and bentonite are disposed at Tseung Kwun O 137.
- 6. The non-inert C&D wastes are disposed at NENT.
- 7. Assume the density of metal is 7,850 kg/m<sup>3</sup>.
- 8. Assume the density of plastic is 941 kg/m<sup>3</sup>.
- 9. Assume the density of paper is 800 kg/m<sup>3</sup>.

# Appendix L Implementation Schedule of Environmental Mitigation Measures (EMIS)

| Impact                          | Environmental Protection Measures  | Timing              | Responsibility | Implementation<br>Status # |
|---------------------------------|--|---------------------|----------------|----------------------------|
| Air Quality                     |  |                     |                |                            |
| Air Quality during Construction | Restricting heights from which materials are dropped, as far as practicable to minimize the fugitive dust arising from unloading/loading.  | During Construction | Contractor     | <b>√</b>                   |
|                                 | <ul> <li>All stockpiles of excavated materials or spoil of more than 50m<sup>3</sup> shall be<br/>enclosed, covered or dampened during dry or windy conditions.</li> </ul>   |                     |                | ✓                          |
|                                 | Effective water sprays shall be used to control potential dust emission sources such as unpaved haul roads and active construction areas.  |                     |                | ✓                          |
|                                 | All spraying of materials and surfaces shall avoid excessive water usage.  |                     |                | ✓                          |
|                                 | <ul> <li>Vehicles that have the potential to create dust while transporting materials shall<br/>be covered, with the cover properly secured and extended over the edges of the<br/>side and tail boards.</li> </ul>  |                     |                | <b>✓</b>                   |
|                                 | Materials shall be dampened, if necessary, before transportation.  |                     |                | ✓                          |
|                                 | Travelling speeds shall be controlled to reduce traffic induced dust dispersion and re-suspension within the site from the operating haul trucks.  |                     |                | ✓                          |
|                                 | <ul> <li>Vehicle washing facilities shall be provided to minimise the quantity of material<br/>deposited on public roads.</li> </ul>   |                     |                | <b>✓</b>                   |
| Air Quality during Operation    | Not required   | N/A                 | N/A            | N/A                        |
| Noise                           |  | •                   | •              | •                          |
| Noise during Construction       | Use of silenced plant or plant equipped with mufflers or dampers in substitute of ordinary plant.  | During Construction | Contractor     | <b>✓</b>                   |
|                                 | Reduce the number of equipment and their percentage on-time.   |                     |                | ✓                          |
| Noise during Operation          | Not required   | N/A                 | N/A            | N/A                        |
| Water Quality                   |  | •                   | •              | •                          |
| Water Quality during            | Road Widening Works, Earthworks and Culvert Extension Works  |                     |                |                            |
| Construction                    | Wastewater generated from any concrete batching washdown of equipment or similar activities should be discharged into foul sewers, after the removal of settable solids, and pH adjustment as necessary. All sewage discharges from the study area should meet the TM standards and approval from EPD through the licensing process is required. | During Construction | Contractor     | <b>✓</b>                   |

Notes (<sup>#</sup>): ✓ – Compliance; Rem – Reminder; Obs – Observation; N/C – Non Compliance; N/A – Not Applicable

|                                | Sand traps, oil interceptors and other pollution prevention installations should be provided, properly cleaned and maintained.  |                     |            | <b>✓</b> |
|--------------------------------|---|---------------------|------------|----------|
|                                | <ul> <li>Runoff from exposed working areas, unfinished slopes and from unlined<br/>temporary channels should be directed to stilling basins and/or silt traps before<br/>discharging to the drainage outfalls.</li> </ul> |                     |            | <b>✓</b> |
|                                | <ul> <li>Regular inspections of stilling basins and/or silt traps is required to ensure that<br/>sediment is not conveyed into the existing drainage system.</li> </ul>   |                     |            | <b>✓</b> |
|                                | Open stockpiles should be covered with a tarpaulin cover.   |                     |            | ✓        |
|                                | During the wet season, any exposed top soils should be covered with a tarpaulin, shotcreted or hydroseeded.   |                     |            | <b>✓</b> |
|                                | Sand and silt from wash-water from vehicle washing should be settled out before discharging into storm drains.  |                     |            | <b>✓</b> |
|                                | Fuels should be stored in bunded areas such that spillage can be easily collected.  |                     |            | <b>✓</b> |
| Water Quality during Operation | Not required  | N/A                 | N/A        | N/A      |
| Waste Management               |   |                     |            |          |
| Waste Management during        | General Waste   |                     |            |          |
| Construction                   | Transport of wastes off site as soon as possible.   | During Construction | Contractor | ✓        |
|                                | Maintenance of accurate waste records.  |                     |            | ✓        |
|                                | Minimisation of waste generation for disposal (via reduction/recycling/re-use).   |                     |            | ✓        |
|                                | No on-site burning will be permitted.   |                     |            | ✓        |
|                                | Use of re-useable metal hoardings/signboards.   |                     |            | ✓        |
|                                | Vegetation from site clearance  |                     |            |          |
|                                | Segregation of materials to facilitate disposal.  | During Construction | Contractor | ✓        |
|                                | Mulching to reduce bulk and where possible review opportunities for the possible beneficial use within landscaping areas.   |                     |            | <b>✓</b> |
|                                | Demolition Wastes   |                     |            |          |
|                                | Segregation of materials to facilitate disposal.  | During Construction | Contractor | ✓        |
|                                | Appropriate stockpile management.   |                     |            | ✓        |

Notes (<sup>#</sup>): ✓ – Compliance; Rem – Reminder; Obs – Observation; N/C – Non Compliance; N/A – Not Applicable

| Excavated Materials  |                     |            |          |
|--|---------------------|------------|----------|
| Segregation of materials to facilitate disposal / reuse.   | During Construction | Contractor | ✓        |
| Appropriate stockpile management.  |                     |            | ✓        |
| • Re-use of excavated material on or off site (where possible).  |                     |            | ✓        |
| • Special handling and disposal procedures in the event that contaminated materials are excavated.                                       |                     |            | N/A      |
| Construction Wastes  |                     |            |          |
| • Segregation of materials to facilitate recycling/reuse (within designated area in appropriate containers/stockpiles).                  | During Construction | Contractor | ✓        |
| Appropriate stockpile management.  |                     |            | ✓        |
| Planning to reduce over ordering and waste generation.   |                     |            | ✓        |
| • Recycling and re-use of materials where possible (e.g. metal, wood from formwork)  |                     |            | ✓        |
| • For material which cannot be re-used/recycled, collection should be carried out by an approved waste contractor for landfill disposal. |                     |            | ✓        |
| Bentonite Slurries   |                     |            |          |
| Bentonite slurries should be reused as far as possible.  | During Construction | Contractor | N/A      |
| • Disposal in accordance with Practice Note For Professional Persons ProPECC PN 1/94.  |                     |            | N/A      |
| Chemical Wastes  |                     |            |          |
| Storage within locked, covered and bunded area.  | During Construction | Contractor | ✓        |
| • The storage area shall not be located adjacent to sensitive receivers e.g. drains.   |                     |            | ✓        |
| Minimise waste production and recycle oils/solvents where possible.  |                     |            | ✓        |
| A spill response procedure shall be in place and absorption material available for minor spillages.                                      |                     |            | <b>✓</b> |
| Use appropriate and labelled containers.   |                     |            | ✓        |
| Educate site workers on site cleanliness/waste management procedures.  |                     |            | ✓        |

|                                      | If chemical wastes are to be generated, the contractor must register with EPD as a chemical waste producer.   |                     |            | <b>✓</b> |
|--------------------------------------|---|---------------------|------------|----------|
|                                      | The chemical wastes shall be collected by a licensed chemical waste collector.  |                     |            | ✓        |
|                                      | Municipal Wastes  |                     |            |          |
|                                      | Waste shall be stored within a temporary refuse collection facility, in appropriate containers prior to collection and disposal.  | During Construction | Contractor | <b>✓</b> |
|                                      | Regular, daily collections are required by an approved waste collector.   |                     |            | ✓        |
| Waste Management during<br>Operation | Not required.   | N/A                 | N/A        | N/A      |
| Ecology                              |   |                     |            |          |
| Ecology during Construction          | Accurate Delineation of Works Area  |                     |            |          |
|                                      | Boundaries of proposed works areas shall be clearly identified and separated from external areas by a physical barrier to prevent encroachment of adjacent habitats.  | During Construction | Contractor | <b>✓</b> |
|                                      | Individual trees which fall within the works areas but which work plans show do not require removal are to be retained and fenced off to maximise protection.   |                     |            | ✓        |
|                                      | <u>Dust generation</u>  |                     |            |          |
|                                      | There are a number of measures which shall be taken as specified in the Air Pollution Control (Construction Dust) Regulation on 'Dust Control Requirements, including the following key measures to be applied during construction: |                     |            |          |
|                                      | vehicle washing facilities to be provided at every discernible or designated vehicle exit point;  | During Construction | Contractor | ✓        |
|                                      | all temporary site access roads shall be sprayed with water to suppress dust as necessary;  |                     |            | ✓        |
|                                      | all dusty materials should be sprayed with water immediately prior to any handling; and   |                     |            | ✓        |
|                                      | all debris should be covered entirely by impervious sheeting or stored in a sheltered debris collection area.   |                     |            | <b>✓</b> |

|  | Surface Run-off In general, mitigation measures shall be in accordance with ProPECC PN1/94 on 'Construction Site Drainage'. Key measures include:  Bund and cover stockpiles to avoid run-off;  Channel any run-off through a system of oil, grease and sediment / silt traps and reuse water on site where ever practical;  All vehicle maintenance to be undertaken within a bunded area; and  Maximise vegetation retention on-site to maximise absorption (minimise | During Construction               | Contractor  | ✓<br>✓<br>✓ |
|--|---|-----------------------------------|---|-------------|
| Ecology during Operation                 | To conduct compensatory ecological planting as specified in the latest landscape plans approved by EPD (Clause 2.6 of the Environmental Permit refers).   | During Construction and operation | Contractor (during construction) / LCSD* (during operation) (Note: * The division of vegetation planting and maintenance responsibilities shall follow the guidelines stipulated in ETWB TCW No. 2/2004.) | N/A         |

# Appendix N Cumulative Statistics on Complaints, Notifications of Summons and Successful Prosecutions

### **Cumulative Complaint Log**

| Complaint<br>Log No. | Date of<br>Complaint     | Received<br>From and<br>Received<br>By | Location of Complainant   | Nature of<br>Complaint   | Outcome  | Status    |
|----------------------|--------------------------|--|---|--|--|-----------|
| C131126              | 26,<br>November,<br>2013 | Mr. Tony<br>Hung from<br>WWF           | Mat Wat<br>River (works<br>sites for box<br>culvert<br>extension) | Suspected unauthorised discharge of water from a construction site to Ma Wat River, Tai Wo Service Road East, Tai Po | It was found that the water leaving the end of the steel pipes was the diverted water from the upstream of the existing box culverts, instead of being discharged from the construction works sites.  An EM&A Programme is being undertaken to monitoring the environmental performance of the construction works, and the Contractor has also implemented appropriate mitigation measures to avoid silt-laden runoff discharging from the works sites into the river.  The complaint is considered an invalid complaint under this Project. | Completed |

| Complaint<br>Log No. | Date of Complaint       | Received<br>From and<br>Received<br>By | Location of Complainant   | Nature of Complaint  | Outcome  | Status    |
|----------------------|-------------------------|--|---|--|--|-----------|
| C141120              | 20<br>November,<br>2014 | EPD                                    | Ng Tung River and Ma Wat River nearby the site of the Liantang/ Heung Yuen Wai BCP Project (Contract Number CV/2012/09) | At Bridge NF426 in Fanling, the whole Ng Tung River showed milky and suspected illegal discharge by nearby factory has undertaken. (粉嶺近天橋編號 NF426 梧桐河整條河河水呈奶白色懷疑附近有工廠非法排放污水) | Water Supplies Department (WSD) conducted a washout procedure on 20 November 2014 at about 9:30am to flush the newly installed water pipe of diameter of 1400mm which has recently finished disinfection. It is understood that the procedure has lasted for about 1 hour and large amount of freshwater has been discharged into the Ma Wat River through a washout port.  Although water was observed seeping from the gantry switch and flew into the works sites, the area is a sump pit and the water was unlikely to run off and entered the river directly. As such, it is anticipated that only freshwater has been discharged into Ma Wat River through the washout port.  Both site inspections conducted by the ET before the complaint (19 November 2014), and after the complaint (24 November 2014) did not identify any deficiencies on environmental mitigation measures. Also, there were no rains during the period and the risk of construction site run-off is considered minimal. | Completed |

| Complaint<br>Log No. | Date of<br>Complaint    | Received<br>From and<br>Received<br>By | Location of Complainant                  | Nature of<br>Complaint  | Outcome  | Status |
|----------------------|-------------------------|--|--|---|--|--------|
|                      |                         |  |  |   | The water from the Ma Wat Channel adjoins the Ng Tung River before passing through the complaint location, so other pollution sources may also occur at upstream of Ng Tung River  The complaint is considered unlikely  |        |
| C171220              | 20                      | 1000                                   | Kaulung                                  | Air quality issue   | due to the construction works of this project.   |        |
| C171228              | 28<br>December,<br>2017 | 1823                                   | Kau Lung<br>Hang and<br>Hong Lok<br>Yuen | Air quality issue nearby Kau Lung Hang and Hong Lok Yuen area. Stockpiling within the Project area was observed to be uncovered, causing dust dispersion within the area. (大埔九龍坑附近的空氣污染問題嚴重。吐露港公路蓮塘口岸隧道工程經常見到沙泥沒有 | The Environmental Team (ET) was informed of the complaint through Chun Wo and CEDD via 1823 online-enquiry/ complaint form received on 28 December 2017 at 9:04am. Investigation was triggered in accordance with the procedures as specified in Section 7.3 of the EM&A Manual. A joint investigation by the ET and the IEC was conducted on 28 December 2017.  As advised by the Contractor, no construction works were carried out during the public holiday. |        |
|                      |                         |  |  | 覆蓋,導致沙土飛揚<br>散佈九龍坑,康樂園<br>一帶,造成極大困擾<br>與明顯健康風險。要<br>求立即改善,懲罰相   | No exceedance of TSP level at the air monitoring station under this Contract was recorded in the past six months except 8 December 2017.   |        |

| Complaint<br>Log No. | Date of<br>Complaint | Received<br>From and<br>Received<br>By | Location of Complainant | Nature of<br>Complaint               | Outcome   | Status |
|----------------------|----------------------|--|-------------------------|--------------------------------------|---|--------|
|                      |                      |  |                         | 關建築商。附圖是該<br>區狀況。昨日洗車,<br>一日已經沙塵滿佈。) | Exceedance on 8 December 2017 was considered not project related as no major excavation works located close to the monitoring location at SR77.   |        |
|                      |                      |  |                         |                                      | Based on the routine environmental site inspection and information provided by the Contractor, it is considered that dust suppression measures have been implemented to minimize dust nuisance arising from the works areas. Nonetheless, the ET and IEC will continue the auditing and reviewing of the Contractor's implementation of mitigation measures during the construction period. |        |
